

3D MAGNETOTELLURIC (MT) MODELING AND INVERSION

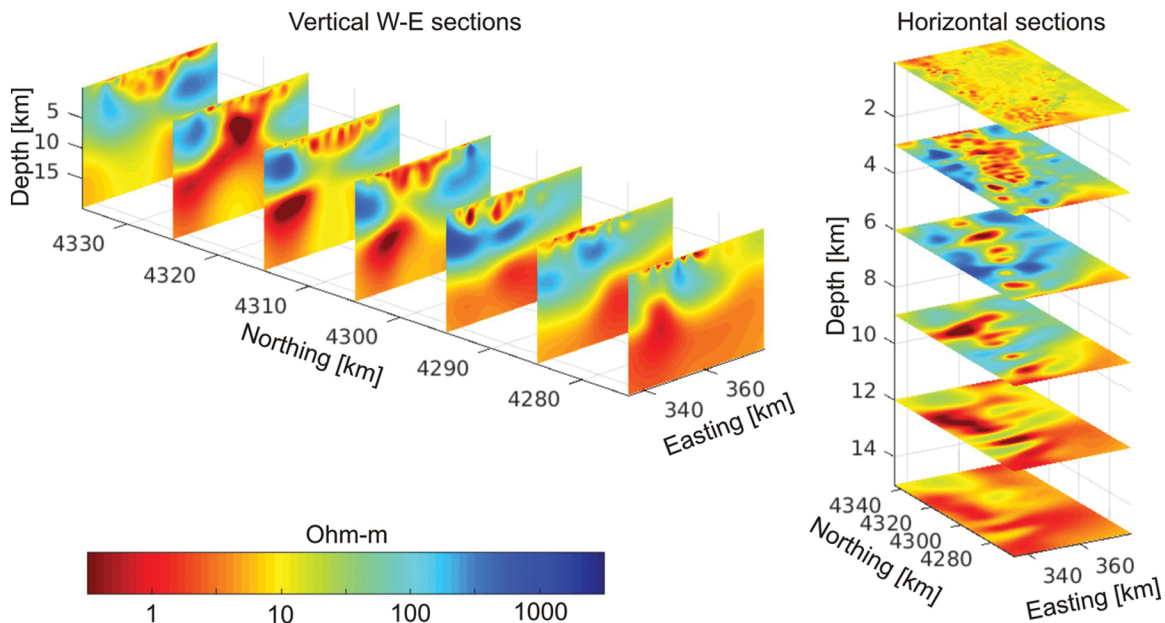

EMVision® proprietary software by **TechnoImaging®** allows for large-scale 3D modeling, inversion and interpretation of entire MT surveys with the following features:

- Any size; from prospect to continental scale
- Focusing regularization for imaging sharp conductivity contrasts
- Joint 3D inversion of all MT tensor, tipper, and invariant components
- All marine and land MT systems supported
- Industry standard data and shared earth model formats

Case Study: Northwestern US
