

3D TOWED STREAMER EM MODELING AND INVERSION

EMVision® proprietary software by **TechnoImaging®** allows for large-scale 3D modeling, inversion and interpretation of entire Towed Streamer EM surveys with the following features:

- 3D seismic and well-constrained a priori models (constrained/unconstrained inversion)
- Focusing regularization for imaging sharp conductivity contrasts
- Electrical anisotropy
- Complex conductivity (IP)
- Bathymetry
- Industry standard data and shared earth model formats
- Other marine CSEM configurations

Case Study: Mariner
